

FORESIGHT

YOUR ONLINE ENERGY TRADING PORTAL

Foresight is an adaptive energy trading solution designed to help organisations with their energy trading.

FORESIGHT CAN HELP YOU:

- Access SSE live prices in gas and electricity markets.
- Manage energy risk and exposure.
- Access live position data, bespoke reports, price triggers and “what-if” scenarios.
- Manage baskets, multiple contracts, and sites within the same system.
- Easy-to-use online portal, plus support from a digital analyst.
- Budget accurately, using non-commodity cost forecasts.

Evolutionary energy trading

With the launch of Foresight, our energy trading offering has truly evolved. With access to our online portal, you can track and monitor SSE live prices, place triggers and alerts and transact energy in near real-time, trading a minimum clip size as low as 0.1MW. Foresight also gives you the comfort of auditable pricing for each trade you make.

Grow your capability

Our Multiple Contract Trading functionality helps you transact energy efficiently to achieve the same price against the selected product for all contracts that you manage.

With the right insight and the ability to trade with speed and precision, you can turn the volatility of the energy market to your advantage.

Foresight can quickly become a key component in your energy trading set-up, bolstering your trading resource and capability and saving you time and effort while growing your confidence in the market.

Instant access

Foresight can be accessed at any time, across any device allowing you to look at a wealth of market information to help you plan your trading strategy. This flexibility allows you to monitor and trade easily wherever you are.

Alerts and triggers

Foresight actively tracks energy markets and allows you to set up advisory alerts if certain market conditions occur. Similarly, you can set triggers that execute firm orders when the market reaches your target transaction level.

Energy forecasting

Foresight provides excellent forecasting and planning tools. It allows you to model pricing scenarios based on open and closed positions while projecting the impact of possible trades through "what-if" scenarios. You can also use the non-commodity cost forecasts within the platform to plan ahead.

Basket options

You can use Foresight to apply a volume of purchased energy to a "basket" of customers (or different divisions within a single organisation). This allows smaller organisations to purchase energy as part of a collective, sharing the costs and the benefits.

Reporting

Foresight has a range of reporting options including managing budgets, tracking exposure and reviewing mark to market positions. User-friendly reports can be viewed online or downloaded in PDF or Excel formats that can be scheduled for distribution to designated members within your team.

A real asset for your business

Foresight's capability allows you to optimise pricing benefits while minimising your exposure to risk. It's an essential online resource that gives you the confidence and capability to take your energy trading to a new level.
