

SSE Energy Solutions Fuel Mix

Our fuel mix is the combination of energy sources used to generate electricity supplied to our business customers. The charts below show a breakdown of the energy sources and the environmental impact, from 1 April 2020 to 31 March 2021.

Renewable Plans

SSE Green*, SSE Next Generation, SSE REGO+, and SSE Green EV

Renewable (100%)

Environmental Impact

Radioactive Waste Calculations
Carbon

0g per kWh
0g per kWh

Other Plans and Tariffs

Renewable (30%)

Natural Gas (62%)

Other (8%)

Environmental Impact

Radioactive Waste Calculations
Carbon

0g per kWh
296g per kWh

SSE Energy Solutions Total

Renewable (55%)

Natural Gas (40%)

Other (5%)

Environmental Impact

Radioactive Waste Calculations
Carbon

0g per kWh
193g per kWh

UK Average

The UK's average fuel mix is shown for comparison

Renewable (40%)

Natural Gas (38%)

Other (3%)

Coal (3%)

Nuclear (16%)

Environmental Impact

Radioactive Waste Calculations
Carbon

0.007g per kWh
194g per kWh

The fuel mix highlights the environmental impact of electricity production, including carbon dioxide (CO₂) emissions, to help you make informed choices about your energy use and supply. You can find more information at: sseenergysolutions.co.uk/fuel-mix
